### Final Deliverable 1

Datasets:

[Movies on Netflix, Prime Video, Hulu and Disney+](#)  
[TV shows on Netflix, Prime Video, Hulu and Disney+](#)

We are going to use a dataset that gives us the movies and TV shows streaming on Netflix, Amazon Prime, Hulu and Disney Plus. We want to create a database where you can easily figure out where a specific movie/TV show is streaming. This solution can make it easier for individuals to find the movie/tv show they're looking for and save others time. This could also help the consumer save money when deciding which platform to purchase based on the movies/tv shows they provide. If we need more data, we could include information about actors and directors. This way a user could find a platfor based on what actors and directors they like.
